

METHOD FOR FIXING A MOVABLE MODULE OF AN ELECTRONIC APPARATUS AND AN ELECTRONIC APPARATUS

Abstract

A method for fixing a movable module of an electronic apparatus is provided, wherein the movable module is installed inside a housing of the electronic apparatus, and the movable module moves when the electronic apparatus is in operation. The method includes providing a fixing member installed on the housing of the electronic apparatus and a positioning member installed on the electronic apparatus, and using a cushion to push the fixing member to the positioning member when the cushion is attached to the housing of the electronic apparatus.
